概要

日本の食品衛生法は、すべての食物関連会社に対して安全性分析と危険制御点 HACCP システム (Hazard Analysis Critical Control Point ; 危害分析重要管理点) を要求している。

これは、一酸化炭素や窒素のみならず食品と直接的な接触をするすべてのガスにも必要とされる。「具体的な手続は、食品添加物ガスの検査手法を用い、衛生管理の記録を必要とする。これらの設備には医学用ガス同様のプロセスを必要とし、施設内外のシリンダー充填時に当該設備を用意する必要がある。

食品各社の品質管理部門が、本法律に対応した手続を実施できるように 2021 年までを準備期間とする。

December 31, 2018

Japan to require HACCP system for all food-related companies

The new Food Sanitation Law in Japan will require a Hazard Analysis and Critical Control Point (HACCP) system from all food-related companies.

This also covers all gases that come in direct contact with food, including carbon monoxide and nitrogen, The Gas Review reported. The process must start during the gas production and filling stages.

“Specific procedures require documentation of sanitation control for food additive gases and recording of all processes. Capital investments may be required for filling cylinders indoors or for filling cylinders on separate lines from industrial gases, as is required for medical gases,” [wrote gasworld](#).

The new regulations are not scheduled to go into effect until 2021, allowing governing bodies to finalize regulation requirements and for quality control departments to implement corresponding procedure changes.
